

Adaptive, Socio-Technical Systems w/ Architecture for Flow

Susanne Kaiser
Independent Tech Consultant
@suksr

Challenges of Building Systems

Building the **right** thing

How aligned is
our solution to
business / user
needs?

Have we
understood
the
problem?

Do we share
the same
common
understanding?

Effectiveness

Building the **thing** right

How efficient
are our
engineering
practices?

How fast
can we deliver
changes?

How easy and
fast can
we change
and adapt?

Efficiency

Unlocking Blockers to Flow

Architecture for Flow Canvas

1 Current Teams & Ways of Working

What are the current teams (structure)?
 What parts/modules of the system do they own?
 What are their team sizes?
 What are the current team dependencies?
 What are the current team interaction modes (PR, inner source, weekly/monthly cross-team meetings, etc)?
 What are their current practices? (e.g. kanban, scrum, planning techniques, etc.)

2 Current Flow

What works well in the flow?
 What blocks the current flow?

Think about what prevents/improves the flow (the perspective of... for example!)

3 Current Business Landscape

Visualising the business landscape with Wardley Maps

Creating a Wardley Map

You get them relatively and not positions like...

4 Categorizing the Problem Space

Discover Subdomains Types

Discovering Subdomain Types

5 Modularity in the Solution Space

Decomposing solution space into bounded contexts (design decisions)

E.g. with EventDriven

6 Future Business Landscape & Bounded Contexts

Visualising the future business landscape with Wardley Maps

Merging Bounded Contexts

Subordinated your Strategic Investment?

7 Future Team Ownership Boundaries

Identifying future team ownership boundaries

Bounded Contexts or capabilities for stream-aligned teams

What is necessary in order to make the stream-aligned teams flourish on their last line of change?

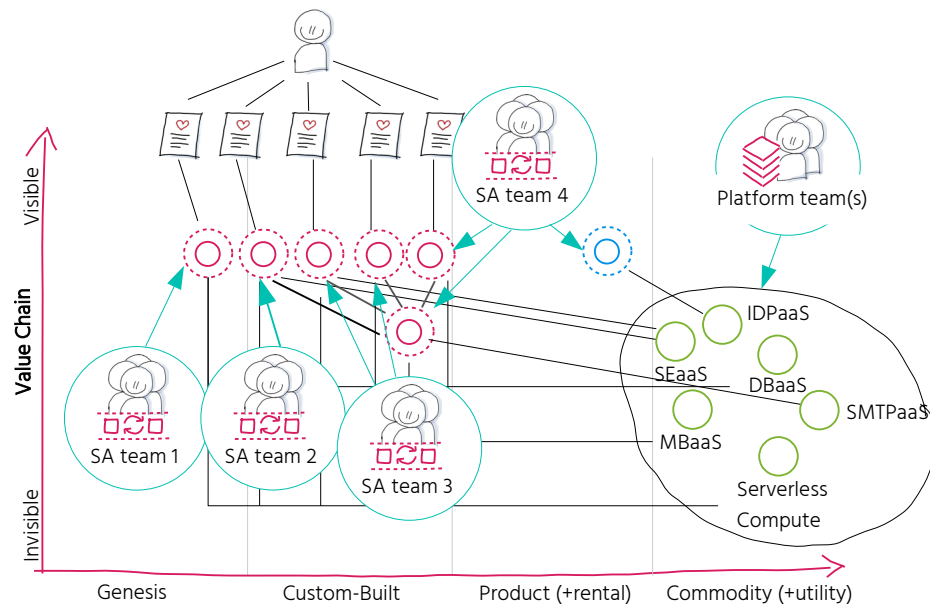

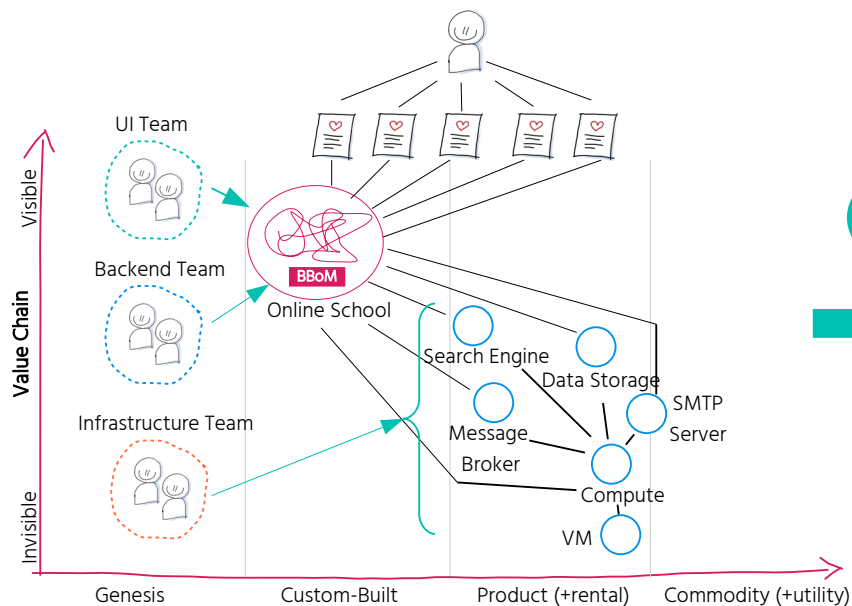

8 Future Team Constellation & Interaction Modes

Team Type

Interaction Modes

How to transition?
